WEATHER OF CONCERN

Weather of Concern

- An upper-level low will approach the Bay Area from the south on Monday. This low will have sufficient moisture with it and will increase shower and thunderstorm chances on Monday and Tuesday.
- Afternoon thunderstorms will be possible across the Sierra north to Lassen Park this weekend. The primary threats will be frequent lightning and heavy downpours
- A cutoff low pressure system over the Central Coast will drift southward Sunday into Monday. The low will draw moisture into Southwest California from the southeast, resulting in a risk of showers and thunderstorms across the areas Sunday and Monday. The highest thunderstorm chances will be Sunday afternoon through Sunday night. The storms may produce heavy downpours and flash flooding, gusty and erratic winds, and dangerous lightning. Strong thunderstorms will be possible, which will be capable of producing hail showers and wind gusts over 50 mph...in addition to heavy rain.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

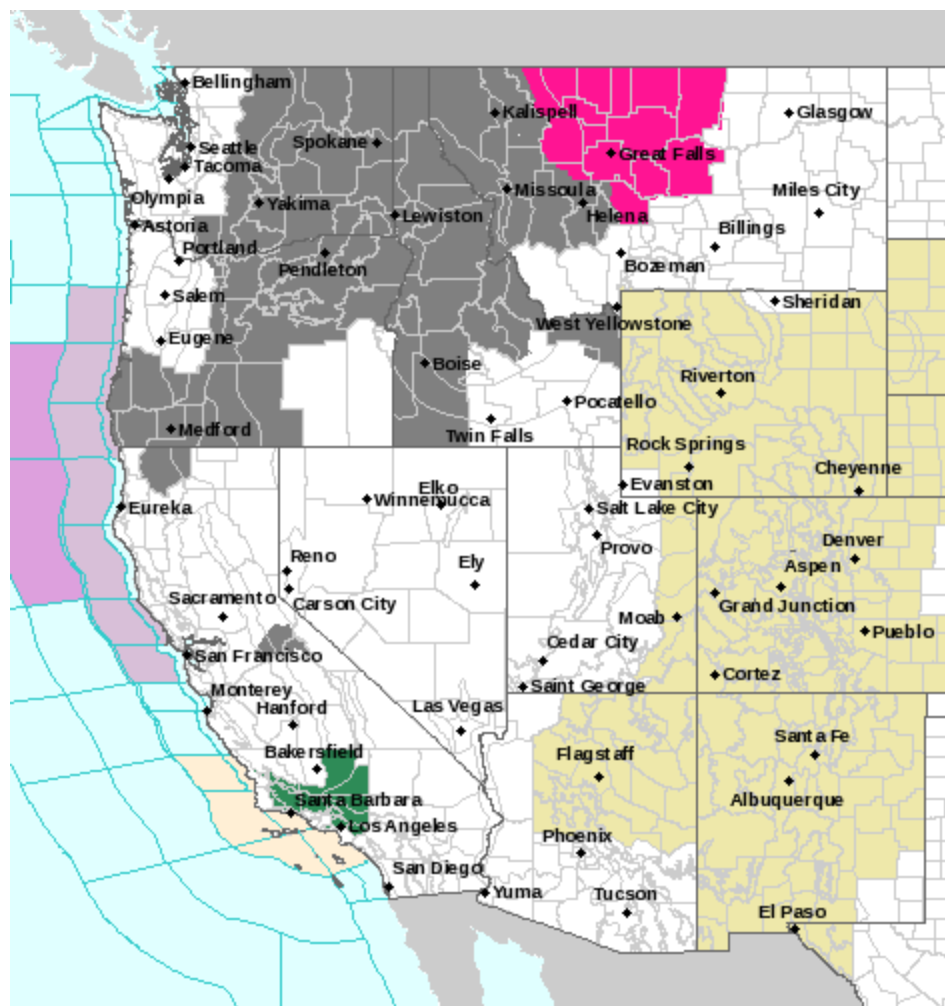

Thunderstorm activity decreasing for a few days. Rather moist weather anticipated to develop early next week. A low over the Bay Area will drift south and linger off the southern California coast for a few days before moving ashore again the first half of next week. A chance of isolated afternoon and evening showers or thunderstorms remains over the mountains again today, then most likely just near Tahoe Sunday. Conditions will be warmer Sunday and Monday with afternoon highs in the warmest inland areas returning to near 100. A period of light to moderate NE to E/offshore winds with lower RH recovery will become possible tonight then be more likely Sunday night.

The low will be moving north Monday and bring moisture and instability back to the North Ops region late in the day. Somewhat cooler conditions with showers and isolated wet thunderstorms are then expected to develop and linger through late Wednesday, including nocturnal activity Monday and Tuesday. After Wednesday, the southern edge of a trough moving through the Pacific NW will pass through North Ops and cool down temperatures to near seasonal normals the latter half of next week, which for the warmest inland areas is afternoon highs in the lower 90s. Daytime RH will be lowering into Monday, then remain moderately high for the most part with better overnight recoveries well into next week. The chance of large fires developing will be on the decrease next week especially, but there will still be decided potential for new fire starts or holdovers to develop.

SOUTHERN CALIFORNIA

A low will pick up some tropical moisture bringing widespread shower and thunderstorm activity to the entire area Sunday. The shower and thunderstorm activity will come to an end across Southern California by Monday afternoon, but widespread shower and thunderstorm activity will continue across Central California through Tuesday evening. Isolated showers and thunderstorms will only occur over the Sierra and Northern Deserts Wednesday as the area of low pressure moves inland across Central California. Most locations are still expected to receive between 0.10 and 0.50 inch of rainfall, but some mountain and desert locations will receive between 1 and 2 inches of rainfall through the middle of next week. Temperatures will remain near normal through early next week, with mid 70s to mid 80s across the mountains and mid 80s to mid 90s in the valleys. Minimum humidity will be above 20% across the region through early next week. There will be strong and erratic winds in and near any thunderstorms through early next week, otherwise will be light. A Pacific trough will drop down the West Coast behind the low pressure area bringing below normal temperatures to the entire area and a deep marine layer to the coast Wednesday through the end of next week. Gusty west winds will surface across the mountain ridges and desert passes Wednesday through the end of next week.
